

# UsableNet AQA Integrations

## JIRA, Azure DevOps, and Other Ticketing Systems

### Seamlessly Track and Resolve Accessibility Issues with Native JIRA & Azure DevOps Integrations

Connect your dev team's workflow directly to UsableNet AQA with secure, bi-directional, native integrations—ensuring faster fixes, cleaner handoffs, and complete visibility.

#### Native Integration with JIRA and Azure DevOps

Works across Cloud and Data Center hosting options using secure OAuth 2.0 authentication.

#### All Issues in One Place

Automatically push accessibility issues from automated tests, manual audits, and usability testing into your ticketing system.

#### Bi-directional Sync

Any updates in your JIRA/Azure tickets (status changes, assignments, etc.) are instantly reflected back in AQA. No duplication or confusion.

#### Developer-Friendly Tickets

Each issue includes prioritized metadata, DOM location, code snippets, and fix recommendations to speed up remediation.

#### Issue Grouping

Send multiple accessibility issues to one ticket in JIRA/Azure.

#### Customizable Fields

Tailor ticket creation to your workflow by mapping fields and formats based on your team's preferences.

#### Team-Specific Filtering

Sort, filter, and assign accessibility issues by project, team, or severity to keep work organized and actionable.

#### Actionable Dashboards

Visualize open issues and progress across teams from a single reporting hub in AQA.
